. you're organized. and can be easily edited by both the cast and director. What's more, scenes can be "load beamed" to multiple PCs to enable multi-viewing. PCWorld LiveScript The LiveScript programming language, originally developed at Red Hat by Suzy Worthey and Malcolm McDowell, is an interpreted, free scripting language, which is cross-platform, multi-user, interactive, and extensible. The language is currently used by the Fedora Project and by many other Linux projects. Features Static typing is used to help prevent accidental runtime errors. The LiveScript Language Server provides a code completion engine. Interactive, session-based programming (SBP). Easy-to-use editor and debugger. and TNM clinical staging for predicting recurrence and prognosis of small renal cell carcinoma. To evaluate the utility of tumor-node-metastasis (TNM) staging system and the tumor-node-metastasis-7 (TNM-7) staging system in predicting recurrence and prognosis of small renal cell carcinoma (RCC) patients. From January 1996 to October 2004, 626 patients with pathologically diagnosed small (T1 and T2) RCC (less than 4 cm) underwent radical nephrectomy. The operative, histopathological and clinical records of all patients were retrospectively reviewed. TNM staging was used to analyze the relationship between T, N and M status and the prognosis of the patients. The TNM-7 staging was established based on the newest 2010 TNM staging criteria. There were 133 patients who developed recurrence after the operation. The 5-year and 10-year recurrence-free survival rates of all patients were 76.4% and 63.7%, respectively. Multivariate analysis showed that the positive lymph nodes were the only independent risk factor for recurrence. The 5-year and 10-year cancer-specific survival rates were 87.5% and 83.4%, respectively. Multivariate analysis showed 82157476af
